

ABSTRACT OF THE DISCLOSURE

The present invention discloses a method of personalizing icons on an electronic communication product, comprising the steps of installing an image processing program into an electronic communication product, executing the image processing program to edit any icon on the screen of the electronic communication product; 5 connecting an input device (such as a keyboard or a light pen) to the electronic communication product to click on the icon; and selecting the type of desired effect on the original icon; and displaying the edited icon on the screen of the electronic communication product. Such method is applicable for an electronic communication platform of handheld computers such as a handset and a personal 10 digital assistance (PDA).
